

RADIOLOGY REPORT — CHEST X-RAY (PA view)

Synthetic data — for software demo only

Patient:	James Okafor	MRN:	MRN-2026-77821
DOB:	1962-07-19	Sex:	M
Exam date:	2026-04-08	Reported by:	Dr. S. Park

Indication

63-year-old male with shortness of breath and exertional chest tightness. Rule out cardiopulmonary cause.

Findings

Cardiac silhouette is enlarged (cardiothoracic ratio ~0.58). Bilateral perihilar haziness and Kerley B lines suggesting pulmonary congestion. No focal consolidation. No pleural effusion. No pneumothorax. Bony thorax intact. Soft tissues unremarkable.

Impression

1. Cardiomegaly with bilateral pulmonary venous congestion — findings consistent with decompensated heart failure.
2. No acute consolidation, effusion, or pneumothorax.
